Rethinking cross-border areas under the lens of spatial justice

Estelle Evrard
University of Luxembourg

CESCI 10 anniversary | 25.04.2019 | Budapest
Context of this presentation

RELOCAL has received funding from the European Union’s Horizon 2020 research and innovation programme under Grant Agreement Nº 727097
The concept of spatial justice indicates **equity in social space**, integrating five dimensions of justice: **social, procedural, distributive, spatial and temporal** (Madanipour et al., 2017: 74).

**Justice is a comparative concept**: it is a process of judgement on the quality of relations between two or more states of affairs. On their own, the number and composition of agents and material objects are not judged to be just or unjust. It is only when they mediate the relations between people and territories, and only in comparison with others, that they find such meanings. Relations, therefore, are the focus of analysis. Through them, the power arrangements that make up spatial governance, behaviour of actors, access to material goods and services, spatial and social relations between them, composition of localities and their relations with other localities become just or unjust” (Madanipour et al., 2017: 78).

**Spatial justice focuses on both**

- the just geographic distribution of resources and opportunities,
- and on the power relations that cause (in)justice between social groups and between spaces.
EPA Alzette Belval Case study analysis
“The issue of territorial inequalities is very strong, it is palpable. When you go from France to Luxembourg, you are really in quite different worlds. This reality is reflected in socioeconomic trends. We face a colossal paradox: the population moves in this territory, which however loses employment in absolute value. Employment is being drained by Luxembourg, with all the disorder this can mean.”

“The proximity of Luxembourg is an opportunity for the territory, it would be insane to deny it. However, you would be blind not to see the consequences of the mode of development on the border territory. (...) The Grand Duchy has developed like other major urban centres around the world. But unlike other metropolises, this metropolisation spills over into neighbouring countries, and does so without consultation with the territories on which it spills over. This phenomenon raises various issues: mobility, of course, but also health, vocational training.”

Villerupt city hall displays the poster of the Italian film festival, the most popular cultural event of the year (on the left) and a banner (on the right) claiming for a “fair distribution of border taxation”.
Conceptual challenges
- Equality # Equity
- Disparity # Inequality # Injustice
- Which scale?

Application scope
- Distribution of power | Modes of leadership
- Participation | Accountability | Legitimacy | Transparency
- Place-based knowledge | Organisational & individual learning
- Impact

→ Spatial justice allows adopting a proactive view on disparities and mechanisms that can contribute to cope with them (i.e. distributive or procedural)
→ Spatial planning and public policies as leverage
